Procedure

Disperse SEPICONTROL A5 in water then add SIMULGEL NS under turbulent mechanical agitation (approximately 1200 rpm- 10 minutes). Gradually add the MICROPEARL pre-dispersed in the oily phase, maintaining agitation. Once the gel is homogeneous, add the preservatives and the fragrance. Turbulent agitation is maintained throughout production.

Comments

SIMULGEL NS Thickening and emulsifying agent in very easy to use liquid form (no pre-dispersion or neutralization). Provides a sensation of freshness followed by a melting effect on contact with the skin. It leaves a feeling of velvety softness. SIMULGEL NS emulsifies all types of oily phases without heating: cream gels with a fresh texture that melt on contact with the skin are obtained.

MICROPEARL M310 Lipo-dispersible powder with excellent absorbent and matt-finishing properties.

SEPICONTROL A5 Active ingredient for oily skin. Works to regulate the five elements that may cause skin imperfections: bacterial proliferation, lipases, 5 α -reductase, inflammation, elastases and free radicals. The skin becomes clearer, less oily and is free of imperfections.
