Procedure

Heat both aqueous and fatty phase to 80°C. Introduce fatty phase into aqueous phase and start homogenizing with a un rotor stator 700 rpm (DUMEK 2kg). Add ingredients in C with continuous homogenization (rotor stator 4'). Cool slowly with moderate stir (paddle type mixer) and introduce ingredients in D at approx. 30°C.

Comments

SENSANOV WR

Versatile phosphate anionic emulsifier effective at low dosage (1 to 3%) Provides a feeling of lightness followed by the sensation of a matt velvety veil which slowly envelops the skin. Finally SENSANOV emulsions leaves the skin supple with a long lasting sensation of comfort.

SIMULGEL EG

Thickening and emulsifying agent in liquid form. Very easy to use (no predispersion or neutralization). SIMULGEL EG perfectly stabilizes emulsions against high temperatures. It provides rich, silky texture that are easy to apply and rapidly absorbed by the skin.

SEPITONIC M3

Multimineral chrono-energizer. Its zinc, copper and magnesium content helps stimulate the cells by increasing the energy profile (Pyruvate, ATP) and overall metabolism (DNA, proteins). Ideal for tired skin, SEPITONIC M3 delivers the elements needed for cell dynamism and the maintenance of skin function. It works to stimulate cell regeneration and helps restore fresh, radiant skin.

PHYTOAGE

Plant extract derived from Chinese tradition which has a double anti-ageing performance. It is used to fight photoinduced ageing (protection of the extracellular matrix and of the dermal-epidermal junction) and hormonal ageing by means of its "hormone-like" structure. Ideal active ingredient for all types of anti-ageing care products, including the special care products required by mature skin.
