Procedure

Dipperse Montanov™ L in a part of water. Heat to 75°C with moderate stir and continue to mix while heating for 30'. Ad the premix B then the ingredient C and start homogenization (rotor stator) for 4' (7kg trimix). Start to cool and introduce the second part of water at 60°C. Homogenize again for 4'. Make vacuum and cool down to 30°C. Add ingredients in E and check final pH.

Comments

MONTANOV L

Glucolipid emulsifier in harmony with nature. MONTANOV L is especially useful to produce fluid formulas whatever the type or quantity of oil phase used. MONTANOV L has a shear-thinning profile that is stable over time and well-adapted to the formulation of sprayable emulsions. It offers easy stabilization in the presence of hydrosoluble active ingredients that are rich in electrolytes. MONTANOV L can promote liquid crystals according to the emulsion diagram, creating water reservoirs within the emulsion to help maintain skin and hair moisturization.

PROMOIS S700SIG
