Procedure

Lab – Silverson and anchor - 300g

Heat A to 80° C. Weigh phase D. Weigh phase C and heat to 80° C (water bath). Add D. Add SEPIMAX™ ZEN to A at 80° C. Make emulsion by adding C+D à A. (rotor stator + counter-screw + anchor). Decrease temperature to 60° C. As soon as emulsion is homogeneous (smooth and shiny), cool down with anchor stirrer till 25° C. Add phase E. Adjust pH to 5.5 – 6.0.

Raw materials from SEPPIC

LANOL™ 99

Isononyl Isononanoate
Emollient agent

MONTANOV™202

Arachidyl Alcohol and Behenyl Alcohol and Arachidyl Glucoside

Glucolipid emulsifier derived from vegetable origin. Promotor of liquid crystals, it plays a role in maintaining skin moisturizing over time. Thanks to liquid crystals which contain water, MONTANOV™202 helps to keep skin moisturized. Ecocert and Nature approved.

SEPIMAX™ ZEN

Polyacrylate Crosspolymer-6

Powder polymer with a MAXIMUM resistance to electrolytes thanks to its high associative behaviour. Stable from pH 2 to 8, it enables the creation of formulas with a specific skin feeling: rich, velvety and elegant. It is now possible to formulate transparent aqueous gels, cream-gels and emulsions with any kind of active ingredients and to achieve ZEN.

AMONYL™ 380 BA

Cocamidopropyl Betaine

Provides a fine foam that is stable over time. Ecocert approved

PROTEOL™ APL

Sodium Cocoyl Apple Amino Acids
